Money Skills

This term, we as governors have spent an afternoon with the year 2 classes delivering a money skills programme, sharing with the children our professional expertise. The children learnt about how to earn money, where and how to keep money safe and the value of the different coins.

As governors we loved getting to know the pupils better and having an active role in the school day. We will be involved in further money skills workshops with year 5 pupils later on in the year.

Computational thinking

At our latest full governor meeting we received a presentation on the computational thinking that all the children are learning about throughout school. Finding out about the different ways children are being actively taught to build their resilience, develop problem solving and risk taking, as well as learning to think systematically in order to improve in all areas of the curriculum, it was a fascinating insight to the changes in learning our children are being taught.

Up-coming events

Governors will once again be running the book fair at the parents' evening in March. Where we will be available to meet all parents and pupils. Please come and say hello.
